Professional Summary

AI-focused Software Engineer with applied, hands-on experience building **Generative AI and NLP** applications – including **RAG** pipelines, AI agents, tool calling, semantic search, and embeddings – using Python, OpenAI API, Google Gemini API, LangChain, and LangGraph. Experienced in the full lifecycle of an AI solution: functional design, prototyping, and testing. Comfortable working in agile, ownership-driven environments. Currently building foundational depth in deep learning frameworks (PyTorch/TensorFlow) to extend into model training and fine-tuning.

Technical Skills

Languages: Python, SQL

Generative AI & NLP: OpenAI API, Google Gemini API, RAG (Retrieval-Augmented Generation), Prompt Engineering, LLMs, Semantic Search, Embeddings

Agent Frameworks: LangChain, LangGraph, Tool Calling, Memory Systems

Machine Learning: Regression Modeling, Feature Engineering, Model Evaluation (scikit-learn-based)

Databases: MySQL, ChromaDB (Vector Database)

Platforms & Deployment: FastAPI, Flask, Git/GitHub

Soft Skills: Ownership, Team collaboration, Problem-Solving, Communication

Experience

Reunyte Services

Software Engineer Intern

Remote / India

January 2026 – August 2026

- Built 2+ Generative AI features using Gemini and OpenAI APIs for Q&A, content generation, and automation, applying prompt engineering to meet functional requirements.
- Engineered 3+ full-stack applications using Python, Flask, and MySQL, taking ownership of features from design through testing and deployment.
- Collaborated with stakeholders in an agile workflow to prototype, test, and refine application features based on feedback.

Projects

Python Autonomous AI Agent | Python, FastAPI, LangGraph, LangChain, OpenAI API, Gemini API

GitHub

- Developed an autonomous, multimodal **AI agent** that executes complex multi-step tasks using OpenAI and Google Gemini APIs.
- Integrated **LangGraph** and **LangChain** with memory and tool calling to build intelligent agentic workflows, following a functional design-prototype-test cycle.

AI Document Question Answering Chatbot | Python, FastAPI, React, NLP, LangChain, ChromaDB

GitHub

- Built a **RAG-based** chatbot applying **NLP** techniques – document parsing, embeddings, and semantic retrieval – to answer questions from PDF documents.
- Designed an end-to-end Document → Chunking → Embeddings → Vector Search → LLM → Answer pipeline using ChromaDB and LangChain.

House Price Prediction System | Python, Machine Learning, Streamlit

GitHub

- Trained and evaluated a regression-based ML model on housing data, iterating through preprocessing and feature engineering to improve accuracy.

Education

Rajendra Mane College of Engineering and Technology, University of Mumbai

B.E. in Computer Engineering — CGPI: 7.26

Maharashtra, India

2022 – 2026

Achievements and Extracurricular

NxtWave Journey – Full Stack Web Development

- Completed certifications in Generative AI, Python Programming, and Databases; attended 3+ workshops including two AI Mega Workshops.

Team Full Throttle (*tft.racing*) — National Level Go-Kart Racing Team

Documentation Head & Driver

Nov 2023 – May 2026

- Led technical documentation for a 20+ member engineering team, demonstrating ownership and cross-functional collaboration.

TCS iON National Qualifier Test (NQT) – IT

May 2026

- Overall Score: 60.11% | Programming Score: 58.48% (Python).
